

The third week was about using React. React is a famous javascript library used for making modern UI.

In this we learnt:

- React fundamentals
- JSX syntax
- Components, props
- React hooks

Unlike traditional HTML pages, React applications are built using reusable components. We divided the chat app into four major components:

- Sidebar.jsx
- ChatWindow.jsx
- MessageBubble.jsx
- MessageInput.jsx

JSX is HTML like syntax that is directly used to return output from component functions. Props act like a mechanism to pass on information that can be used in the function and between components.

Ultimately all these were combined in the App.jsx file.
